Organization of the Review

From the IIoT problem context to a corpus-bounded evidence synthesis and research agenda

I	**INTRODUCTION**	Context and terminology; technical problem; previous reviews; objective and questions; contributions and organization.
II	**BACKGROUND AND RELATED WORK**	IIoT and FL context; heterogeneous compression and aggregation; blockchain verification; positioning relative to prior reviews.
III	**SYSTEMATIC LITERATURE REVIEW METHOD**	Planning: review design, scope, and questions. Conducting: search, eligibility, screening, reviewer agreement, extraction, and coding.
IV	**RESULTS OF THE SYSTEMATIC REVIEW**	Study-selection flow and agreement; findings for each of the five capabilities; cross-capability coverage.
V	**DISCUSSION AND RESEARCHER GUIDANCE**	Interpret findings; identify challenges, opportunities, and practical research and reporting priorities.
VI	**LIMITATIONS**	Boundaries of the search, selection, scoring, and available study evidence.
VII	**CONCLUSIONS AND FUTURE WORK**	Synthesize the review findings and their implications for future IIoT research.

The five-capability matrix organizes the results and anchors the review questions, discussion, and research guidance.
